Contents.

- 1-2. Essential facets of ceramic art and technology - Hands-on.
Thomas Sing.
- 3-4. Hands-on individuality of teeth & gingiva with micro layering.
Florian Steinheber.
- 5-6. Understanding the fundamentals of your zirconia material and restorations.
Daniel Klinger.
- 7-8. The nature concept, hands-on – “My way to layer anteriors”.
Danijela Modrić.
- 9-10. Full Arch Zirconia Implant Restorations, from CAD to completion.
Scott Hippey & Andy Fairbanks.
- 11-12. Live Patient – Hands-on anterior refractory veneers.
- 13-14. Harley Street Study Club – Origins of the Swiss watch company to the
modern dental company.
Darren Shorrocks.
- 15-16. Exocad – Hands-on expert implant crowns & bridges, designed by you.
Scott Hippey.
- 17-18. Teeth & tissue – Hands-on master Creation course.
Stefan Picha.
- 19. Your demonstrators.

“LEARNING FROM REAL LIFE DENTAL TECHNOLOGY”

CM TechstudioV2 – 25th & 26th November 2022

Producing aesthetic and functional ceramic solutions is all about inspiration, motivation, emotion, and passion. With his unique perspective on these essential facets of ceramic art and technology, Thomas Sing begins his famous all-encompassing course with a single anterior case and ends with a complex full upper and lower restoration on implants.

Join Thomas for an energetic two days of knowledge, with a full hands-on bespoke experience within the CMTechstudioV2. Layer with Thomas and take on board his wealth of knowledge and technical skills.

Thomas will share ceramic cases that worked out nicely, and others that didn't. In other words, real life.

“I will talk about factors dental technicians have to consider, focusing on the essentials and elements that are worthless.

“We should all love what we do, and to do so we must take on board the learning experiences collected over each case. Learning from real life dental technology is what makes us better technicians in general, and I'm excited to share my experience over a variety of cases”.

ESSENTIAL FACETS OF CERAMIC ART AND TECHNOLOGY

“RECONSTRUCT CLOSE TO NATURE INDIVIDUALITY”⁺ Soprano® Surface

CM TechstudioV2 – 4th and/or 5th November 2022

We are welcoming Florian Steinheber to the studio covering all you need to know on micro layering ceramics, both teeth and gingiva.

Join us for a single day, or both days!

Day 1 - Hands-on replicating nature by micro layering anterior teeth with Soprano® Surface 100% ceramic. See how this pre-mixed material can transform and achieve the results you require with minimal effort and material.

Day 2 - Hands-on recreation of life like gingiva on your ceramic restorations. Understand how you can apply Soprano® Surface gingiva to your current workflow, achieving speed, accuracy and improving aesthetics.

Both dates are held within our bespoke training studio and come with the exceptional level of hospitality only available at Ceramet UK.

“The Soprano® Surface Kits contain everything we need for our cases. A well thought out palette of structure masses and colours, enable me to reconstruct close to nature individuality”.

“ALL YOU NEED TO KNOW ABOUT ZIRCONIA MANAGEMENT”

CM TechstudioV2 – 28th September 2022

Ceramet UK are thrilled to announce that Daniel Klinger from cadFLIX will be joining us in the UK, covering all you need to know about zirconia management.

This session is aimed at users new and old of zirconia, and technicians currently utilising zirconia for final restorations. Understand how to analyse the initial case situation, design do's and don'ts, while delving into the importance of parameters.

For those currently milling, or those looking to venture into milling, Daniel will give insights into CAM, design nesting and positioning, sintering of small to large frameworks, and general handling requirements of the material.

Daniel will share tips and tricks from his years of experience, covering a range of areas including scanning, IT infrastructure, complete digital workflows and digital dental technology.

See final results from Daniel, completed using processes and protocols discussed throughout the afternoon.

“I'm excited to join you in the UK within the new CM TechstudioV2, I look forward to meeting you all in September”

ALL YOU NEED TO KNOW ABOUT ZIRCONIA MANAGEMENT

“MY WAY TO LAYER ANTERIORS”

CM TechstudioV2 – 21st & 22nd April 2023

It's with great pleasure we can announce Danijela Modrić into the studio with a superb two-day hands-on Creation ceramics experience.

Over the busy two days you'll spend time with Danijela, gaining valuable knowledge and skills brought together from decades of technical experience. You'll complete an anterior case from strat to finish, with mentoring and guidance throughout from Danijela.

“In our daily work we all struggle with the perfect aesthetic result of natural anterior teeth. It's very difficult to copy nature, and we currently don't have the materials at our disposal to entirely achieve that. Our work will always be recognizable under a certain source of light.

“What is important when producing these types of restorations? Everything is important, from preparation, material selection, to the shape, colour, and texture.

“See you all in April 2023”.

“MY WAY TO LAYER ANTERIORS”

“HOW WE’VE RESTORED ZIRCONIA FULL ARCH IMPLANTS”

Enjoy a full day in our studio where we bring together digital workflow, technical advice, processing tips and finishing tricks for your full arch zirconia implant restorations.

Scott will be covering full arch design from start to finish, including temporaries, 3d printing, milling, library selection and component selection, with an open discussion throughout.

Andy brings together the stages following Scott, covering material and components selection, how to achieve the best results, finishing stages and techniques. Andy invites questions throughout for all stages covered and other areas of dental technology.

“We’ve put together this full day course to explain and show how we’ve restored Zirconia full arch Implants over many years. Zirconia is one of the materials and methods used for restoring full arch implants, and we’re happy to share our experience, pitfalls, and processes for this style of restoration.

“We look forward to seeing you later in the year and welcoming you on board!”.

Harley Street Study Club– 21st September 2022

“ORIGINS OF THE SWISS WATCH INDUSTRY TO THE MODERN DENTAL COMPANY ”

“Firstly, thank you for the invitation to lecture.

“We face the challenges of precision, fit and function, daily in the dental industry. Many industries encounter similar requirements and are transferable business models that we can all learn from.

“Purley, by good fortune, I had the opportunity to work and live in the heart of the watch valley for 4 years in Switzerland, 2003- 2007. This industrial area is obsessed with performance, precision, ruled by some tough taskmasters and some immense entrepreneurs. Many of the lessons learnt during this period helped lay foundations and provided valuable life lessons, which helped me in my daily running of a modern dental company.

“My aim is to share this experience with the Harley Street Study Club members in a thought provoking, open manner, for the future benefit of fellow dental professionals.”

Darren Shorrocks
CEO Ceramet UK

CHALLENGES OF PRECISION, FIT AND FUNCTION, DAILY IN THE DENTAL INDUSTRY

“ACHIEVING A LIFELIKE RESULT IS OUR GOAL”

CM TechstudioV2 – 28th & 29th October 2022

It's with great excitement we bring you a live patient course with Fechmi Housein, an amazing opportunity over two days, with usual Ceramet hospitality.

We invite you for a full two-day experience with Fechmi within our studio, where all delegates will work hands-on layering and producing anterior veneers to be fitted at the end of day two, for our live patient who will be present throughout.

Value control, shaping, surface texture and tooth design will be covered over both days you'll work through the whole procedure to produce refractory Veneers for our patient in the chair. From first consultation, patient analysis, producing a Waxup, transmitting into the mouth (Mock-up), layering of your veneers, shaping, try-in stage, through to fitting at the end of day two.

“Achieving a lifelike result for the patient is our goal, and we can experience how small changes can have a big impact on the outcome and final result.

“I look forward to greeting you all and introducing our live patient.”

“DAILY IMPLANT DESIGN SKILLS IN THE LAB”

CM TechstudioV2 – 14th October 2022

You're invited to spend the day with one of the top designers in the UK, Scott Hippey, here at the CMTechstudioV2. Upon arrival you'll be presented with your own Exocad workstation and software, working alongside, and with Scott for the entire day.

Throughout this hands-on training experience, you'll cover a variety of digital areas including Ti-base crown design, custom abutment crown design, large Ti-base bridge design, large custom abutment bridge design, designing and printing your own digital models.

Within these areas you'll cover a multitude of points explaining the do's and don'ts, case selection, component selection, platform switching, material selection and printing options.

“I'm looking forward to this event, meeting faces new and old. Digital design doesn't need to be complicated, and I'm here to show you how. See you in October”.

“HARMONY BETWEEN WHITE & PINK”

CM TechstudioV2 – 3rd & 4th February 2023

Throughout this spectacular two-day hands-on course, you'll be layering a 6-unit anterior Zirconia bridge framework within our studio, with the usual Ceramet hospitality treatment. Here you'll be given the opportunity to acquire expertise in the layering of individual teeth and gingiva with Stefan.

Learn everything about managing tooth and tissue opacity with translucency, how to apply the use of stains for individual effects and achieving the optimum surface texture.

“Layering white and pink isn't everything, perfect harmony between both is important to understand, and how the margin form flows with the tooth shape, and why this is so.

“The aim over the entire two days is to combine these techniques and skills, helping you create a natural appearance within your restorations, and enabling you to get a little closer to nature”.
